Abstract. New data on the distribution of 26 species of sphecid digger wasps in Palaearctic are given. *Isodontia paludosa* (Rossi, 1790), *Prionyx niveatus* (Dufour, 1854), *Podalonia ebenina* (Spinola, 1839), *Ammophila adelphe* Kohl, 1901, and *A. tekkensis* Gussakovskij, 1930 are newly recorded from Russia, as are *Parapsammophila turanica* F. Morawitz, for Mongolia, *Sceliphron curvatum* (F. Smith, 1870) and *Podalonia fera* (Lepeletier de Saint Fargeau, 1845) for Georgia; the distribution patterns of other species have also been enlarged. The new synonymy of *Podalonia flava* (Kohl, 1901) = *Podalonia rothi* (de Beaumont, 1951), **syn.n.** is proposed.

Резюме. Приводятся новые данные по распространению 26 видов роющих ос семейства Sphecidae в Палеарктике. *Isodontia paludosa* (Rossi, 1790), *Prionyx niveatus* (Dufour, 1854), *Podalonia ebenina* (Spinola, 1839), *Ammophila adelphe* Kohl, 1901, *A. tekkensis* Gussakovskij, 1930 указываются впервые для России, *Parapsammophila turanica* F. Morawitz, 1890 — для Монголии, *Sceliphron curvatum* (F. Smith, 1870) и *Podalonia fera* (Lepeletier de Saint Fargeau, 1845) — для Грузии; распространение остальных видов расширено. Предложена новая синонимия для *Podalonia flava* (Kohl, 1901) = *Podalonia rothi* (de Beaumont, 1951), **syn.n.**

Introduction

Sphecidae — mainly large, actively flying, clearly visible insects. Sphecid wasps characterized by caring of posterity. The females make the nests and provide it by provision — paralyzed or dead insects from the orders of Orthoptera, Dycloptera, Lepidoptera, Hymenoptera, and spiders. The adult insects feed on

nectar and pollinating the flowering plants. The elongated mouthparts of most Sphecidae allows them to visit flowers with deeply located nectaries. Sphecidae make their nests in the ground, often in sandy soils; the females of *Sceliphron* make the mud-nests and *Chalybion* arrange nests in the ready cavities. Most of Sphecidae prefer the open landscapes; they are rare in forests. The family distributed worldwide, mainly in arid, semiarid and tropical regions. Number of taxa: Word — 19 genera, 772 species; Palaearctic — 13/256; Russia — 10/65.

Materials and methods

This paper is based on the material from the Zoological Institute of Russian Academy of Sciences, St. Petersburg [ZISP], Institute of Systematics and Ecology of Animals, Siberian Branch of Russian Academy of Sciences, Novosibirsk [ISEN], Institute of Plant and Animal Ecology, Ural Branch of Russian Academy of Sciences, Yekaterinburg [IPAE] and from the personal collection of M.V. Mokrousov, Nizhny Novgorod [CMM]. The additional abbreviations are used in the text: MCZL — Musée Cantonal de Zoologie, Lausanne, Switzerland; NHMW — Naturhistorisches Museum, Wien, Austria; TMB — Természettudományi Múzeum, Budapest, Hungary. Next collectors are abbreviated: SB — S. Belokobylskij, VL — V. Laktionov, M.M. — M. Mokrousov, MP — M. Proshchalykin. The general distribution is given by Pulawski, 2016. The new records are asterisked (*).

Taxonomy

Podalonia flava (Kohl, 1901)

Ammophila flava Kohl, 1901: 163, ♀, lectotype: ♀, China: Neimenggu: no specific locality (NHMW), designated by Dollfuss, 2010b: 1256; Kohl, 1906: 283; Gussakovskij, 1934: 4; Tsuneki, 1971a: 145, 1971b: 4.

Podalonia flava: Yasumatsu, 1940: 92; Bohart, Menke, 1976: 144; Nemkov, 1990: 79, 2005: 141; Nemkov et al., 1995: 385; Hua, 2006: 276; Nemkov, 2008: 17; Danilov, 2009: 55; Nemkov, 2009a: 47, 2009b: 235; Danilov, 2010: 45; Dollfuss, 2010a: 547, 2010b: 1246, 1248, 1256; Danilov, 2011a: 189, 2011b: 202; Nemkov, 2012: 434; Dollfuss, 2013: 588; Danilov, 2014a: 425; 2014b: 518; Wang et al., 2016: 449; Pulawski, 2016.

Ammophila obo Tsuneki, 1971a: 146, ♂, holotype: ♂, Mongolia: Bulgan Aymag: Somon Dashinchilen (TMB). Synonymized with *Podalonia flava* by Dollfuss, 2010b: 1256.

Podalonia obo: Bohart, Menke, 1976: 144; Nemkov, 1986: 93; Wu, Zhou, 1996: 62; Hua, 2006: 276.

Ammophila rothi de Beaumont, 1951: 260, ♀, ♂, holotype: ♀, Morocco, «Maroc. Midelt 30 V 1947 J. de Beaumont // Typus [red label] // rothi Beaum. J. de Beaumont det. 1943 f ♂ Typus» (MCZL), examined, *syn. n.*; 1958: 291, 1967: 261; Lomholdt, 1975: 7.

Podalonia rothi: Leclercq, 1955: 66; Bohart, Menke, 1976: 145; Smit, 2000: 173; Gayubo, Özbek, 2005: 11; Gayubo et al., 2006: 206; Ljubomirov, Yildirim, 2008: 46; Gayubo et al., 2009: 362; González et al., 2009: 622; Bitsch, 2010: 107; Dollfuss, 2010a: 556, 2010b: 1246, 1248, 1265; Danilov, 2014a: 426, 2014b: 518; Mokrousov, Vafin, 2014: 54; Yildirim, 2014: 30; Mokrousov, Popov, 2016: 562; Pulawski, 2016.

Diagnosis. The male of *P. flava* (Kohl) similar with *P. tydei* (Le Guillou), *P. fera* (Lepeletier de Saint Fargeau), *P. luffii* (E. Saunders), *P. mauritanica* (Mercet), *P. albohirsuta* (Tsuneki) and *P. pungens* (Kohl), but differs from *P. tydei* (Le Guillou) and *P. fera* (Lepeletier de Saint Fargeau) by having body with appressed silvery setae; from *P. luffii*

(E. Saunders) and *P. mauritanica* (Mercet) by shape of penis valves and shape of clypeus; from *P. albohirsuta* (Tsuneki) and *P. pungens* (Kohl) by shape of penis valves. The female of *P. flava* (Kohl) similar with *P. tydei* (Le Guillou), *P. luffii* (E. Saunders), *P. mauritanica* (Mercet), *P. fera* (Lepeletier de Saint Fargeau) and *P. kaszabi* (Tsuneki) but differs from *P. tydei* (Le Guillou) by having body with appressed silvery setae; from *P. luffii* (E. Saunders) and *P. mauritanica* (Mercet) by partly red mandible and distinctly asymmetrical protarsomeres; from *P. kaszabi* (Tsuneki) and *P. fera* (Lepeletier de Saint Fargeau) by scutum with sparse, scattered and more finely punctures.

Description. Male. Body length 12–19 mm. Head black. Clypeus slightly elongate; apical margin slightly emarginated. Clypeus, subantennal sclerite and paraocular areas of frons with appressed silvery setae. Vertex, occiput and gena microsculptured, sparsely punctate. Head with erect setae, black on vertex and occiput. Mandible and palpi black. Mesosoma. Black. Pronotum sparsely punctate, more or less shiny. Scutum densely punctate (punctures 1 diameter apart), inter-spaces more or less shiny. Mesopleuron punctate and slightly rugose. Scutellum longitudinally ridged in posterior half. Pro- and mesosoma with black erect setae. Metapleuron and propodeum rugose. Propodeal enclosure (metapostnotum) rugose, with white erect setae. Mesosoma with white erect setae. Tegula black. Wings yellowish in specimens from east part of the range and hyaline in western populations; veins amber or brown. Legs black. Arolia distinct. Claws without subbasal tooth. Spines of legs black. Metasoma. T1–T3, S1 (except petiole)–S3 red, sometimes anterior part of T4, S4 red; petiole, T4–T7, S4–S7 black. Penis valve slender, in lateral view with large thorn apicoventrally.

Female. Body length 13–19 mm. Head black. Clypeus convex medially. Clypeus, subantennal sclerite and frons without appressed setae. Vertex and occiput microsculptured, punctate. Erect setae black. Mandible and palpi black. Mesosoma black. Pronotum sparsely punctate, shiny. Scutum shiny, densely punctate (punctures 1 diameter apart). Mesopleuron punctate and rugose. Metapleuron and propodeum rugose. Propodeal enclosure (metapostnotum) rugose, with white erect setae. Erect setae of pronotum, scutum and propodeum black and white; pro-, meso- and metapleuron with black erect setae. Tegula black. Wings yellowish in specimens from east part of the range and hyaline in western populations; veins amber or brown. Legs black. Protarsomeres slightly asymmetrical. Arolia distinct. Claws without subbasal tooth. Spines of legs black. Metasoma. T1–part of T4, S1 (except petiole) — part of S4 red; petiole, T4–T6, S4–S6 black.

Remarks. We synonymized *P. flava* and *P. rothi* based on the specimens of *P. flava* from Eastern Siberia and Mongolia and specimens, which are designated as *rothi* from Western Siberia, Kazakhstan (many localities), European Russia, Italia (Sicilia) and the holotype of *P. rothi* (de Beaumont) from Morocco. During the study of these specimens we are not find any differences except the differences in the color of the wings in the males and in the females.
